

菜品列表 菜品详情 Api 接口设计 指定 字段查询、排序

主讲教师：（大地）

合作网站：www.itying.com （IT 营）

我的专栏：<https://www.itying.com/category-79-b0.html>

- 一、 查询数据自定返回的字段.....1
- 二、 排序 关联查询排序.....2

一、查询数据自定返回的字段

<https://sequelize.org/master/manual/model-querying-basics.html>

<https://www.sequelize.com.cn/core-concepts/model-querying-basics>

```
async productList() {  
  let result = await this.ctx.model.ProductCate.findAll({  
    include: {  
      model: this.ctx.model.Product,  
      attributes: [  
        "id", "cid", "title", "price", "imgUrl", "sort"  
      ],  
    },  
    order: [  
      ['sort', 'DESC'],  
      [this.ctx.model.Product, 'sort', 'DESC'],  
    ],  
  });  
  this.ctx.body = {  
    "success": true,  
    "result": result  
  };  
}
```

二、排序 关联查询排序

<https://sequelize.org/master/manual/eager-loading.html>

<https://www.sequelize.com.cn/advanced-association-concepts/eager-loading>

```
async productList() {
  let result = await this.ctx.model.ProductCate.findAll({
    include: {
      model: this.ctx.model.Product,
      attributes: [
        "id", "cid", "title", "price", "imgUrl", "sort"
      ],
    },
    order: [
      ['sort', 'DESC'],
      [this.ctx.model.Product, 'sort', 'DESC'],
    ],
  });
  this.ctx.body = {
    "success": true,
    "result": result
  };
}
```
