

# 使用 qr-image 生成桌号二维码以及结合 html5 Canvas 加水印合成图片二维码

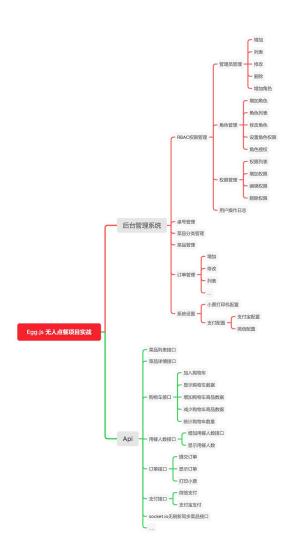

#### 主讲教师: (大地)

合作网站: www.itying.com (IT 营)

我的专栏: https://www.itying.com/category-79-b0.html

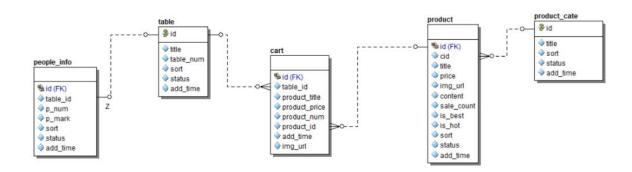

一、	Egg.js 无人点餐项目功能介绍	1
<u> </u>	桌号管理相关数据库表	2
三、	qr-image 生成桌号二维码	2
四、	Html5 Canvas Api 合成图片	3

## 一、Egg.js 无人点餐项目功能介绍

## 二、桌号管理相关数据库表

## 三、qr-image 生成桌号二维码

https://www.npmjs.com/package/qr-image

```
1、安装模块
npm install qr-image

2、引入模块
const qr = require('qr-image');

3、生成二维码图片
var img = qr.image('http://www.itying.com', { type: 'png'});
this.ctx.status = 200;
this.ctx.type = 'image/png';
this.ctx.body = codeImg;
```

#### 四、Html5 Canvas Api 合成图片

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Document</title>
    <style>
         #canvas {
              margin: 0 auto;
             display: block;
             width: 505px;
              height: 730px;
         }
    </style>
</head>
<body>
      <canvas id="canvas" width="505" height="730"></canvas>
</body>
<script>
    // 1.获取 canvas 这个 DOM 节点
    var canvas = document.querySelector('#canvas');
    //2.定义 2d 画布
    var ctx = canvas.getContext('2d');
    const img1 = new Image();
         img1.onload = () => {
           ctx.drawImage(img1, 0, 0);
           //填充文字 注意字体
           ctx.font = '30px "Microsoft YaHei"'
           ctx.fillStyle = "#ffffff";
           ctx.fillText("一层一号", 170, 320);
           const img2 = new Image();
           img2.onload = () => {
             ctx.drawlmage(img2, 150, 340);
           }
```

```
img2.onerror = err => {
    // throw err
    console.log(err);
}
//需要注意顺序
img2.src = "images/code.png";
}
img1.onerror = err => { console.log(err); }
//需要注意顺序
img1.src = "images/bg.png";

</script>
```
